Important information about your medicine

Your medicine has been changed

We continually review the medicines we prescribe for our patients to ensure our prescribing is based on the best and most up to date evidence available for safety, clinical and cost-effectiveness.

All GPs across Worcestershire are currently reviewing the use of a number of products. Certain medicines have been selected as preferred products as they are just as effective for most patients, but are less expensive for the NHS. These changes have been made to help doctors to continue to use high quality treatments whilst making the most effective use of available resources.

Thank you in advance for your co-operation with this change. If after trying the new medicine you still have concerns then please contact the Practice Pharmacist or your usual GP at the surgery.
